

LKCareEvolve Release Notes

V4.26 – Published Q2 2026

For ELLKAY Customers

200 Riverfront Blvd, Elmwood Park, NJ 07407

P: (201) 791-0606 | F: (201) 791-0605 | www.ELLKAY.com

Introduction

LKCareEvolve is ELLKAY's robust Orders and Results Outreach Portal. It is a cloud-based application that allows users to submit orders to the Lab, run medical necessity checks, validate required information, view results, and much more. It gives providers quick and efficient electronic ordering features, helps Labs to streamline operations, enables robust connectivity options, and supports Labs in maximizing their reimbursements.

This release includes a refreshed user interface designed to improve readability, consistency, and usability across the application. The update modernizes the visual experience while keeping existing workflows, navigation, roles, permissions, data, configuration, and integrations unchanged.

If you have questions, or need guidance on any specific modules or settings, please contact your ELLKAY Account Manager at LabAccountManagement@ELLKAY.com.

Key Highlights

- ▶ **Refreshed user interface:** Screens have a cleaner and more consistent look and feel across LKCareEvolve.
- ▶ **No workflow impact:** Existing workflows, navigation paths, menus, field names, roles, permissions, data, configuration, and integrations remain unchanged
- ▶ **Improved long-term foundation:** This update reduces legacy user interface dependencies and supports better security, maintainability, and future usability improvements.

Screenshot Examples

The examples below show representative before-and-after views of the refreshed user interface.

Results Inbox:

Before: Previous view with legacy styling and table layout

After: Refreshed view with cleaner spacing, updated icons, and improved table readability.

Customer Impact: Workflow and navigation remain unchanged. Users can continue using the same steps.

Improvements & Features

Enhancement	Change Details	Value
Manifest List	Added a container-based Manifest List for courier tracking while keeping the existing order-based manifest list unchanged. The manifest can be organized by requisition type, location, and lab account, and includes barcode, specimen, patient, and collector sign-off details.	Helps labs manage high-volume specimen transport more efficiently and improves visibility into courier pickup and specimen handoff workflows.
Standing Order	Added the ability to export standing orders by patient	Supports review of active standing orders and helps users make informed decisions about whether orders should continue, be updated, or be canceled.
Lab-Level Test Groups	Added the ability to define test groups at the lab level and make them available during ordering. Practice-level favorite test groups remain unchanged.	Reduces duplicate setup when onboarding practices and helps maintain consistent lab-defined ordering options.
Ordering Review Page	Updated the Copy To provider label from UPIN / NPI to NPI / CPSO.	Aligns provider identification terminology with current U.S. and Canadian standards.
PSC: By Incomplete Orders	Added order notes and modification details, including who last modified the order and when.	Improves team communication, reduces duplicate follow-up, and helps users prioritize stale incomplete orders.
Ordering Screen: Report Comment	Report comments now appear as an informational banner on applicable ordering pages.	Helps users see important report-related information directly in the ordering workflow.
Results Interface	Corrected display of collection date and result date for all results, including unsolicited results.	Improves result review accuracy and helps users rely on complete result information.
EMR- LabCorp	ICD diagnosis codes are now transmitted to the LabCorp API in the same sequence selected by the user during order entry.	Helps preserve diagnosis priority and reduces risk of billing or processing issues caused by reordered codes.
ADT / Encounter Number	The CSN number, also referred to as Encounter Number, is now applied to same-day and future-dated orders when available through ADT responses.	Automatic application of encounter number removes manual interventions and saves time.
Outbound ABN Messaging	Outbound messages now correctly send ABNSelectedOption as 0 when no ABN is generated or signed.	Improves outbound message accuracy and reduces ABN-related compliance risk.
