Serratia marcescens (23)			0	100	100	100			100	100		100	0				87	100			Serratia marcescens (23)
Staphylococcus aureus - MSSA (88)							77			99	77	100	100	100	0		98	99	100	Staphylococcus aureus - MSSA (88)	
Staphylococcus aureus - MRSA (51)							10			94	10	100	100	0	0		96	90	100	Staphylococcus aureus - MRSA (51)	
Staphylococcus epidermidis (224)							52			92	52	100	100	47	0		83	58	100	Staphylococcus epidermidis (224)	
Staphylococcus saprophyticus (44)							95			100	98	100	100	89	0		95	95	100	Staphylococcus saprophyticus (44)	
Stenotrophomonas maltophilia (11)												91						100			Stenotrophomonas maltophilia (11)

This report includes MH-UCH Inpatients & Emergency Depts.

Includes automated tests performed by Vitek II and manual tests performed by E-Test.

Special Notes:

- Susceptibilities for organisms with <30 isolates should be interpreted with caution, as these can be significantly affected by outliers.
- Multi-Drug Resistant Organism (MDRO) applies to Ceftriaxone and Ceftazidime Resistant organisms within the Enterobacteriaceae group only.
- 1 Carbenpenemase-Resistant Enterobacteriaceae (CRE) E. coli has been confirmed in 2015 by CDPHE.
- CREs have been seen in the community.

MDRO PROTOCOL: An automatic infectious disease consult will occur for CRE/CRPA from ANY site and blood specimens positive for S. aureus, Enterococcus, or Yeast in inpatient adult patients age 15 and over. Unless there are extenuating circumstances, the patient will be seen within 24 hours.

Inducible Resistance:

MRSA inducible clindamycin resistance 15%
MSSA inducible clindamycin resistance 15%

Grp B Strep Clinda = 59% Sensitive;
18% are resistant due to "inducible mechanism"

While susceptibility testing may indicate that bacteria are susceptible to an antibiotic, some bacteria may have enzymes that can be "turned on" or induced (thus inducible resistance) in vitro resulting in antibiotic resistance

Total % Frequency:

MRSA = 38% (396)

MSSA = 62% (633)

MDRO = 3.9% (197)

VRE = 5.3% (33)

CRE = 0.1% (4)

CRPA = 1.9% (5)

Blood Cultures:

Frequency of Pathogen Isolation:

1. Escherichia coli (135)
2. Staph. aureus - MSSA (91)
3. Staph. aureus - MRSA (56)
4. Strep. pneumoniae (41)
5. Klebsiella pneumoniae (38)
6. Staph. epidermidis (33)
7. Enterococcus faecalis (23)
