

Help us help you!

Every time we receive a poorly labeled specimen in the lab, we have to take the time to re-print and re-label each specimen which delays valuable patient results. Please help us by labeling each tube carefully!

Our robots don't have necks to read crooked or low barcodes

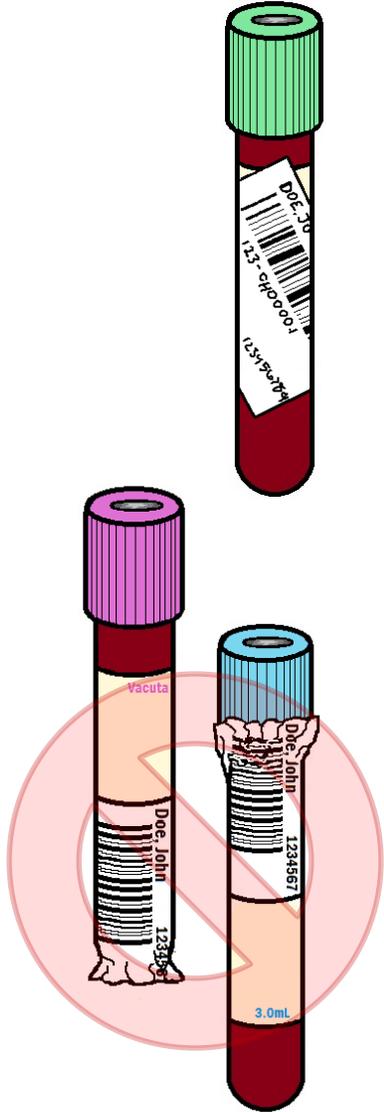

Label just under cap with name towards top

Barcode straight up and down

Visible window to see blood

No folds or wrinkles

The laboratory techs and robots greatly appreciate it!
