Re: Preliminary Results: Cytogenetics

---

The Cytogenetics laboratory offers assays designed to detect chromosomal abnormalities. Cytogenetics is pleased to announce the implementation of preliminary result delivery directly in the Electronic Medical Record (EMR, i.e., PennChart/EPIC). Preliminary results for conventional cytogenetics and/or FISH testing, when available, may be found in the EMR beginning on Monday, February 24. Preliminary results will be supplanted by a final report when complete. Preliminary results should be interpreted cautiously and may differ from final results.

Please refer to the header of the report in the EMR to determine if the results displayed are preliminary or final.

**For additional information and questions:** Call the Cytogenetics Laboratory (215-662-4937) on weekdays during regular business hours.
