

laboratory results and reporting

reporting

- TAT
 - Batching of samples, limited samples
 - Staffing, workload management
 - Test prioritization
 - Special reviews
- Flow of report information: Sunquest > Epic > MKC
- Some lab reports are directly linked to the test in EPIC while others are scanned to the Media tab of the patient's chart
- Please contact the lab if you have issues receiving reports or if you have suggestions about report formats

Dayton Children's Hospital Laboratory Test Directory

PREFERRED VS MINIMUM BLOOD COLLECTION VOLUMES

- The **preferred volume** optimizes testing and allows the laboratory to quickly process the specimen, perform the test, and repeat testing, if necessary. If possible, please submit the preferred volume.
- The **minimum volume** is the amount required to perform an assay once and does not allow for repeat testing. Minimum volumes may be necessary when venipuncture is technically difficult or the patient is at risk of complications from blood loss.
