

PHILOSOPHY / PURPOSE, OPERATIONS, AND ORGANIZATIONAL STRUCTURE

PHILOSOPHY / PURPOSE

The primary objective of the laboratory is to serve patients by providing high quality laboratory services. This objective takes precedence over all other considerations. The needs of pediatric patients differ significantly from adult patients, necessitating a specialized approach to providing clinical laboratory testing for infants and children. Therefore, the goal is to deliver high quality laboratory services to our patients, as quickly as possible; these specialized services are provided by competent medical technologists, technicians, and phlebotomists under medical supervision.

OPERATIONS – Who to Contact in the Lab

The Dayton Children's Hospital Laboratory consists of Pathology, Genetics, and the Clinical Laboratories, which includes Chemistry, Hematology, Microbiology, Virology, Transfusion Services, and Phlebotomy.

- The availability of every test is found within the individual test listing.
- The Pathology department has a Pathologist available in-house Monday – Friday 8:30am to 5:00pm. A Pathologist is on-call, for emergencies, at all other times.
