PEDIATRIC REFERENCE RANGES IN THROMBOSIS & HEMOSTASIS

Reference ranges from 15 days to 17 years are based on published data by Toulon P, *et al.* Age dependency for coagulation parameters in pediatric populations: results of a multicenter study aimed at defining the age-specific reference ranges. *Thromb Haem*. 2016 Mar 17;116(1).

*Effect on the pediatric population in this age range is uncertain.

** Reference ranges are established using an adult population. Effect on the pediatric population reference range **ages 0-14 days** is uncertain. All other age-specific pediatric ranges may not be accurate due to reagent differences.

‡INR reference ranges are reagent lot specific. The INR is calculated using the geometric mean from a reference population of adults. (See Cerner for current ranges.) Effect on the pediatric population reference range is uncertain.
