

Laboratory Testing Update

As of February 20th, the ferritin reference range for females will be adjusted to more closely reflect a physiologic basis. This change will help identify more women at risk for iron deficiency.

The current reference range for ferritin in females is: 13-150 ng/mL. **The new reference range for ferritin in females is: 30-150 ng/mL.**

If you have any questions, please call Amy Binion, Chemistry Manager, at 859 301-2077.
