Multiple Component, Reflex, Confirmatory and Accepted Clinical Practice Tests

Department of Pathology and Laboratory Medicine 2019

Texas Health Medical Laboratory / Texas Health Harris Methodist Fort Worth Hospital / Texas Health Specialty Hospital / Texas Health Burleson/ Texas Health Willow Park

The Centers for Medicare and Medicaid Services (CMS) will reimburse only for tests that meet the Medicare coverage criteria and are reasonable and necessary to treat or diagnose an individual patient. Tests ordered, including components of organ and disease related panels, will be billed and paid when all components are medically necessary per CMS criteria. The United States Department of Health & Human Services, Office of Inspector General, takes the position that an individual who knowingly causes a false claim to be submitted may be subject to sanctions or remedies available under civil, criminal and administrative law.

A valid order must document the diagnosis and/or symptoms that support the clinical reason for the diagnostic test. This can include the ICD code, but must include the narrative diagnosis. Failure to provide proper documentation on the requisition form may result in the denial of claims. Medicare Coverage Database (MCD), which includes National Coverage Determinations (NCD) and Local Coverage Determinations (LCD) can be accessed at http://www.cms.hhs.gov/mcd/overview.asp

The following information is intended to inform the Medical Staff of routine practices in the Department of Pathology and Laboratory Medicine based on physician orders for laboratory testing. The tables document the following:

- Test orders that require multiple subparts for completion {for example, an order for IgG subclasses by definition converts into an order for quantitation of IgG 1; IgG 2; IgG 3; and IgG 4 with the appropriate charge for each subclass of IgG}.
- Tests that require multiple additional tests to be performed to achieve the ordered results (for example, urine drug screen consists of individual tests for benzodiazepines; cocaine; amphetamine; cannabinoids; opiates; and barbiturates).
- Tests results which indicate additional testing is required {for example, an order for a urine culture may result in the identification of one or more organisms with susceptibilities as indicated}.

Additional information may also be obtained from the THFW homepage select "THFW Lab Test Catalog".

The attached document is divided into the following sections:

I. Multiple Component Tests

This section delineates tests that contain multiple component tests as determined by a single order in that one test ordered by the physician results in the performance of multiple tests with associated codes and charges.

- 1. Tests Referred to Outside Laboratories (pages 3-16)
- 2. Microbiology (page 17)
- 3. Immunology (page 18)
- 4. AMA's Organ or Disease Specific Panels (pages 19-20)
- 5. Chemistry (pages 21)
- 6. Hematology (page 22)
- 7. Coagulation (page 23)
- 8. Transfusion Services (pages 24 26)
- 9. Anatomic Pathology (pages 27 31)

This section delineates tests that may be added to the original order based on initial laboratory findings without an additional physician

- 1. Microbiology (pages 32-33)
- 2. Chemistry (pages 34)
- 3. Hematology (page 35)4, Transfusion Services (pages 36-38)
- 5. Anatomical Pathology (page 39)

The following section delineates tests that contain multiple component tests as determined by a single order; - that is, one test order by the physician results in multiple tests being performed with associated codes/charges.

The following section delineates tests that contain multiple component tests as determined by a single order. That is one test order by the physician results in multiple tests being performed with associated codes/charges.

Cytology and Histology: Tests (Multiple Component Tests and/or Test Clarification)
The referral of a specimen to Anatomic Pathology (Surgical Pathology, Cytology, etc.) represents a request for a pathology consultation. If in the judgment of the pathologist, additional routine, histochemistry, cytochemistry, electron microscopy, and/or immunohistochemistry stains/techniques are indicated, they may be ordered by the pathologists.

Hematology

Tests that may be added on to:	CPT	Notes:
Complete Blood Count (CBC)	85025	
Manual Differential or smear review	N/A	Criteria used for reflex smear review are based on instrument flags and/or results of specified portions of the testing process reported on the hemogram.
Pathologist Smear Review	85060	Order for this test is requested by the bench technologist based on departmental criteria (Criteria available upon request). Can also be ordered by physician.
Body Fluid Cell Count	89051	
Pathologist Body Fluid Review	88108	Order for this test is requested by the bench technologist based on departmental criteria (Criteria available upon request). Can also be ordered by physician.
CSF Cell Count	89051	
Pathologist CSF Review	88108	Order for this test is requested by the bench technologist based on departmental criteria (Criteria available upon request). Can also be ordered by physician, if desired.
